Headline	Syarikat Takaful Malaysia Berhad (6139.KL) Able To Corral Gains of 15.38pc for The Week				

Shares of SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL) have been trending up over the past five bars, revealing solid bullish momentum for the shares, as they ran 15.38% for the week. Looking further out we note that the shares have moved 19.32% over the past 4-weeks, 36.36% over the past half year and 52.62% over the past full year.

Many individual investors who trade stocks are looking for the next big breakout. It can be much more exciting to be able to tell glamorous stories of picking a winning stock before everybody else was aware. Of course, this is no easy task. There are so many stocks to choose from, and hunting for undervalued stocks may take lots of time that many investors do not have. Other investors will strictly trade the big established names with the hope that consistent growth will provide stable returns to the portfolio. Understanding risks involved with picking stocks can help the investor figure out what is best for them individually. It is typically considered wise to make sure that there is proper diversification in the stock portfolio. Finding that balance to achieve long lasting portfolio health is generally what most investors attempt to accomplish when trading equities.

Investors may be tracking certain levels on shares of SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL). The current 50-day Moving Average is 4.41, the 200-day Moving Average is 4.00, and the 7-day is noted at 4.85. Moving averages can help spot trends and price reversals. They may also be used to help find support or resistance levels. Moving averages are considered to be lagging indicators meaning that they confirm trends. A certain stock may be considered to be on an uptrend if trading above a moving average and the average is sloping upward. On the other side, a stock may be considered to be in a downtrend if trading below the moving average and sloping downward.

Traders may be relying in part on technical stock analysis. SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL) currently has a 14-day Commodity Channel Index (CCI) of 165.43. Despite the name, CCI can be used on other investment tools such as stocks. The CCI was designed to typically stay within the reading of -100 to +100. Traders may use the indicator to determine stock trends or to identify overbought/oversold conditions. A CCI reading above +100 would imply that the stock is overbought and possibly ready for a correction. On the other hand, a reading of -100 would imply that the stock is oversold and possibly set for a rally.

At the time of writing, the 14-day ADX for SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL) is 47.10. Many technical chart analysts believe that an ADX value over 25 would suggest a strong trend. A reading under 20 would indicate no trend, and a reading from 20-25 would suggest that there is no clear trend signal. The ADX is typically plotted along with two other directional movement indicator lines, the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI). Some analysts believe that the ADX is one of the best trend strength indicators available.

The Relative Strength Index (RSI) is one of multiple popular technical indicators created by J. Welles Wilder. Wilder introduced RSI in his book "New Concepts in Technical Trading Systems" which was published in 1978. RSI measures the magnitude and velocity of directional price movements. The data is represented graphically by fluctuating between a value of 0 and 100. The indicator is computed by using the average losses and gains of a stock over a certain time period. RSI can be used to help spot overbought or oversold conditions. An RSI reading over 70 would be considered overbought, and a reading under 30 would indicate oversold conditions. A level of 50 would indicate neutral market momentum. The 14-day RSI is currently sitting at 81.93, the 7-day is at 89.51, and the 3-day is spotted at 96.83 for SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL).

From time to time, even solid companies may experience some sort of setback. Just because a company encounters one negative event, it might not be appropriate to sell the stock. Often times, the stock may still be valuable on a fundamental level, and there may be plenty of room for resurgence. When bad news hits, the stock price may be greatly impacted. Sometimes there can be an overexaggeration which leads to erroneous selling. This can in turn provide buying opportunities to those in the know. Investors who do the homework and closely examine the underlying numbers may put themselves in a good position when situation like this arise. Investors that are looking for longer term value may find that a panic sell-off is the perfect chance to get into a stock that has just suffered a temporary setback. Paying attention to these occurrences can greatly help the investor spot potential buying opportunities in the equity market.
