Headline	Syarikat Takaful Malaysia Berhad (6139.KL) Stock Pops 57.89pc for the Quarter				

SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL) shares have continued their upward march, moving 57.89% higher over the past quarter. The stock has clocked in a change of 11.32% most recently for the past week. In taking a look at recent performance, we can see that shares have moved 22.95% over the past 4-weeks, 60.43% over the past half year and 76.47% over the past full year.

Investors might be trying to step up their game in order to play a more active role with their investments. Investors who keep a close watch on what is happening with their money may be putting themselves in a good spot to attain financial success in the markets. Being knowledgeable and comfortable about investments may be a great way to be certain that the hard earned money is working for the individual. Wise investors typically have a detailed plan that entails realistic expectations about profits in the stock market. There will always be risks dealing with the equity market, but hoping to get lucky may lead to severe losses and other pitfalls down the road. Everyone may have a different risk threshold when it comes to investing. It may be highly important to evaluate one's own overall financial situation before going full throttle into the markets.

Currently, the 14-day ADX for SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL) is sitting at 56.68. Generally speaking, an ADX value from 0-25 would indicate an absent or weak trend. A value of 25-50 would support a strong trend. A value of 50-75 would identify a very strong trend, and a value of 75-100 would lead to an extremely strong trend. ADX is used to gauge trend strength but not trend direction. Traders often add the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to identify the direction of a trend.

Investors have the ability to use technical indicators when completing stock research. At the time of writing, SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL) has a 14-day Commodity Channel Index (CCI) of 286.06. Developed by Donald Lambert, the CCI is a versatile tool that may be used to help spot an emerging trend or provide warning of extreme conditions. Moving averages have the ability to be used as a powerful indicator for technical stock analysis. Following multiple time frames using moving averages can help investors figure out where the stock has been and help determine where it may be possibly going. The simple moving average is a mathematical calculation that takes the average price (mean) for a given amount of time. Currently, the 7-day moving average is sitting at 5.52. Moving averages have the ability to be used as a powerful indicator for technical stock analysis. Interested traders may be keeping an eye on the Williams Percent Range or Williams %R. Williams %R is a popular technical indicator created by Larry Williams to help identify overbought and oversold situations. SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL)'s Williams Percent Range or 14 day Williams % R currently sits at -19.05. In general, if the indicator goes above -20, the stock may be considered overbought. Alternately, if the indicator goes below -80, this may point to the stock being oversold.

Shifting gears to the Relative Strength Index, the 14-day RSI is currently sitting at 82.25, the 7-day is 88.00, and the 3-day is currently at 94.91 for SYARIKAT TAKAFUL MALAYSIA BERHAD (6139.KL). The Relative Strength Index (RSI) is a highly popular momentum indicator used for technical analysis. The RSI can help display whether the bulls or the bears are currently strongest in the market. The RSI may be used to help spot points of reversals more accurately. The RSI was developed by J. Welles Wilder. As a general rule, an RSI reading over 70 would signal overbought conditions. A reading under 30 would indicate oversold conditions. As always, the values may need to be adjusted based on the specific stock and market. RSI can also be a valuable tool for trying to spot larger market turns.

Most investors are aware that not all stocks will be performing well at the same time. Different stocks may have alternate reactions to various economic factors, world events, and business happenings. When one stock is up, another one might be on the way down. Keeping the portfolio full of names from different sectors can help offset imbalances when one stock or sector may be performing poorly while another stock or sector is doing well. Diversification is typically recommended with all types of investing. Many factors may come into play when trying to pick the right stocks to own. Investors may want to figure out how much they are willing to risk, and what kinds of returns they are looking for. Many beginner investors may not be comfortable picking stocks on their own. Seeking professional advice may be one avenue to pursue, but it is usually a good idea to know exactly what holdings are in the portfolio at all times, as markets can move quickly and without notice.
